EXPERIENCE

Security and Automation Engineering Intern | BOSCH | [LinkedIn](#) Jan 2026 – Mar 2026

- Independently developed an internal training management application to digitize a 3-phase operator onboarding workflow, eliminating projected third-party development costs of ~₹1,00,000
- Designed and implemented an IAM Joiner Automation workflow enforcing role-based access control (RBAC) for secure employee onboarding and access provisioning
- Developed a Python-based automation script to validate employee attributes and enforce role-based access assignment, improving access control accuracy and reducing manual provisioning effort by ~25%
- Identified and resolved multiple workflow inconsistencies through structured testing and validation, improving application reliability prior to deployment

Network Traffic Monitoring and Threat Detection System (Python-based)

- Built a SOC-style lab using Kali Linux and Ubuntu VMs to simulate distributed traffic scenarios
- Captured and processed 1,000+ network packets using Wireshark and Tshark for network traffic inspection
- Developed a Python-based monitoring script to detect abnormal traffic patterns and flag potentially suspicious source IPs for further analysis
- Simulated burst ICMP traffic to test detection thresholds and anomaly identification
- Automated alert generation for high-volume traffic patterns, reducing manual packet inspection by ~65%

VeriFIR – Blockchain-Based FIR & Evidence Integrity System | [Link](#)

- Developed a blockchain-based FIR and digital evidence integrity system using TypeScript, Node.js, Solidity, and IPFS
- Implemented SHA-256 hashing and smart contracts to ensure tamper-proof storage and verification of FIR records and evidence
- Integrated IPFS decentralized storage and MongoDB for secure evidence management and used Sepolia Testnet for smart contract deployment and testing
- Designed role-based dashboards for citizens, police officers, and administrators with secure backend APIs and evidence verification workflows

POSITION OF RESPONSIBILITY

Google Developer Groups on Campus - Organizer & Lead Organizer | [LinkedIn](#) | [LinkedIn Post](#) | [LinkedIn Post](#)

- Spear-headed ticket sales and brought in ₹70,000 in revenue as volunteer in 2024
- Managed and scaled a 600+ student tech community through workshops, hackathons, and study jams in 2025
- Led organization of a 1400+ attendee Pune's largest multi-college technical student two-day conference - GDGoC WOW Pune 2025, involving 30+ colleges and 100+ volunteers
- Coordinated with stakeholders, speakers, and teams to ensure smooth execution of events

CERTIFICATES

- Google Cybersecurity Professional Certificate (Foundations of Security, Risk Management, Network Security)
- TryHackMe Pre-Security
- Deloitte Australia Cyber Security Job Simulation
- Mastercard Cybersecurity Virtual Experience
- Tata Cybersecurity Security Analyst Job Simulation

CORE COMPETENCIES

- **Security & Monitoring:** Information Security, Log Analysis, Security Monitoring, Threat Analysis, Incident Investigation, Root Cause Analysis, IAM, RBAC, Access Provisioning
- **Programming & Scripting:** Python, Java, SQL, Bash
- **Tools:** Wireshark, Tshark, VMware, Git, Docker, MySQL, Microsoft Excel, Power Apps, Power Automate
- **Operating Systems:** Linux (Ubuntu, Kali), Windows

EDUCATION

- **B.E. in Computer Engineering (Honours in Cybersecurity)**, AISSMS College of Engineering, Pune
 - CGPA: 7.91**[Oct 2022 - June 2026]**
- **12th HSC**, Matoshri Junior College, Nashik - 74.33%
- **10th ICSE**, Fravashi Academy, Nashik - 87%
